LinkedIn: <http://linkedin.com/in/mbongeni-franklyn-ngwenya-b71335298>

Github : <https://github.com/franklynmbongeni>

TECHNICAL SKILLS

Programming languages: Python, C++,Bash

Tools and technologies: Git, Mysql,

Networking,socket, http.server

Concepts: Data Structures and Algorithms

Operating systems: Windows, Linux

EDUCATION

B.Sc Computer Science
Vistula University

2023 - 2028

LANGUAGES

English: fluent

Polish: A1

PROFILE

I am a Computer Science student in 2nd year at Vistula university, with strong foundations in data structures, algorithms and software development.I have hands on experience in python and c++ through academic and personal projects.I am extremely enthusiastic about building scalable systems and eager to contribute to impactful projects

ACADEMIC PROJECTS

LAN file transfer system(python)

- Designed and implemented a LAN-based file transfer system enabling browser-based iPhone <--> Linux file exchange via dynamically generated QR-code bootstrap URL
- Built a multithreaded Python HTTP server (http.server) handling concurrent file uploads/downloads with chunked streaming (64KB buffers) to minimize memory overhead for large transfers
- Engineered a secure file access layer using normalized path resolution and root confinement to prevent directory traversal and unauthorized filesystem access
- Developed a stateless web client (HTML/CSS/JS) supporting asynchronous file uploads with XHR progress tracking and REST-like endpoints for file operations
- Integrated QR-based session bootstrap mechanism using qrcode + PIL to eliminate manual network configuration and reduce connection friction to a single scan
- Implemented hybrid desktop-control architecture using Tkinter GUI + background daemon threads for real-time server lifecycle management and observability
- Optimized LAN transfer UX by combining local IP auto-discovery, lightweight HTTP routing, and zero-dependency mobile access (no native app required)

WEATHER DESKTOP APP(PYTHON,REST API, PyQt5)

- Built a cross-platform desktop weather application using Python and PyQt5
- Integrated OpenWeatherMap API to fetch and display real-time weather data
- Implemented full error handling for HTTP/network issues (timeouts, invalid city, API errors)
- Designed a responsive GUI with styled components using Qt Stylesheets (QSS)
- Added dynamic weather icons based on weather condition codes
- Improved user experience with input validation and clear error messaging
